

CAVWAY: A new Connected and Automated Vehicle proving ground in the UK

CAVWAY is a new Connected and Automated Vehicle proving ground facility designed and operated by IDIADA, together with our consortium partner Prova Developments. It will be based near Oxford in the UK and completed by the end of 2022.

What makes **CAVWAY** unique is that it will include a **comprehensive set of highway junctions all within a fully connected, controlled, repeatable and, safe environment**. It will also offer ADAS and Automated Driving development and validation capabilities, according to the latest EuroNCAP and Homologation regulation requirements.

- **Multiple motorway junctions for merging and diverging manoeuvres**
- **Different grade junctions and slopes**
- **Flexible longitudinal platform and intersection areas allowing configurable scenarios**
