

Network validation

At the integration phase of the V-Model, Applus IDIADA can provide the following services in validating the vehicle network.

DESCRIPTION

- Detailed review of the network specifications as per applicable ISO standards to identify deviations, incomplete and missed items
- Conduct consultancy service, including workshops and training on the state of the art in automotive networks
- Complete network validation tests: on the bench and on the vehicle
- Automated tests scripts development for faster and easier validation
- The networks covered by Applus IDIADA are CAN, LIN and Flexray
