

Road safety

In addition to its involvement in passive safety development activities, Applus IDIADA is active in the field of passive safety and road safety research.

DESCRIPTION

Furthermore, Applus IDIADA counts on the necessary test tracks to develop and evaluate the performance of road infrastructure devices such as road barriers, road furniture, road railings and impact attenuators.

- Accident research (retrospective and in-depth)
- Road infrastructure testing for light and heavy vehicles
- Road infrastructure testing for motorcyclist injury mitigation
- Emergency system testing (eCall)
- Road safety consultancy
- Road safety research.
