

Software and Rapid Prototyping

Applus+IDIADA offers proven experience in production-ready software development for:

- ADAS functions
- Engine management systems
- Infotainment systems
- After-treatment systems
- HEV-EV powertrain controls
- Gateways and BCM
- Design and validation processes according to ISO 26262 for critical safety applications
- Rapid prototype controls using Model Based Design and off-the-shelf prototype ECUs

Our field of expertise also includes off-the-shelf solutions for rapid prototyping and short series production, always working with industry standard tools:

- Distribution of OpenECU® products
- A flexible hardware platform
- Easy development of prototype applications
- Short series production for niche applications
- Foundation for larger volume solutions
