

Worldwide homologation

European Union and United Nations:

IDIADA is designated as a **Technical Service for all European Union (EU) and UN Regulations**, such as the Spanish Ministry of Industry (**E/e9**), the Dutch Approval Authority-RDW (**E/e4**) and the Romanian Approval Authority (**E/e19**), providing any **EC /ECE** regulation possible.

As a result of a trusted relationship with the Spanish Approval Authority for over 30 years, IDIADA provides e/E9 digitally signed certificates in a very short delivery time.

In the rulemaking process IDIADA participates in Geneva and Brussels working groups as technical advisor of the Spanish Ministry of Industry, which allows us to be continuously updated on any new regulatory development.

Rest of the world:

Outside the EU and the country members of the UNECE 1958 Geneva Agreement, IDIADA is also designated as a **Technical Service or foreign testing laboratory for many more regions**, such as: Japan (TRIAS through NTSEL), Taiwan (VSTD through VSCC), Malaysia (UN through JPJ), Gulf Countries and Australia.

In the rest of the world, IDIADA has established partnerships with the main homologation stakeholders in each region to ensure that you obtain the required information and certificates in the most efficient way and through your IDIADA

Homologation contact person. These partnerships include having agreements in all major countries such as India (ICAT and ARAI), China (CATARC, CQC and CCAP), Brazil (CETESB and IBAMA) and USA (EPA, CARB and NHTSA) among others.
