

## Body, doors and closures

Applus IDIADA offers complete engineering and testing services to the global automotive industry for the design and development of body, doors and closures. We count on first class state-of-the-art engineering tools and testing facilities that fulfil the most advanced and demanding technical requirements of OEMs around the world. Backed up by a widely experienced international team of engineers and technicians, our services cover all the phases of the development project, from target setting to testing and validation.

Breakdown of service:

- Benchmarking and target setting
- Styling
- Packaging
- Surfacing
- CAD/CAE
- Testing and validation (For further information, see our PDF "Testing and validation").
